

## MC-1264 compact PACK PNEUMATIC GUN AND CARTRIDGE INJECTION

### MC Fast Pack Cartridge Series – 1264 compact

#### Properties:

1. Low viscosity, epoxy duromer resin.
2. Fast set time.
3. Cure under dynamic load conditions.
4. Moisture tolerant and force transmitting.
5. High compressive and tensile strength.

#### Applications:

1. Rigid injection for deep penetration of cracks, joints and defects in concrete structures.

#### Packers:

1. Fast Pack series offers surface and bore packer and hammer tools for surface and bore hole injection options.
2. Please see Principles of Injection Flyer for more information on packer options and method guide for pneumatic gun and cartridge injection.

#### Fast & Effective Results:

1. A fast, ready-to-use system, no separate mixing of material using a set mixing ratio.
2. No material wastage through mixing up too much material, cleaning the pump and more.
3. No additional cleaning of pump and equipment and no solvents needed.
4. No additional waste disposal of liquid waste or reacted materials
5. Allows optimal viscosity as mixing occurs just before injection
6. Lower purchase cost compared to injection pumps
7. No maintenance required
8. Single person injection job and guidelines flyer provided.
9. Control amount of material by cartridge.
10. Safe contained system protects for applicators and environment due to lower injection pressures and no open liquids or thinners.

#### Fast Pack Cartridges:

The MC Fast Pack cartridge series offers flexible, paste, and rigid PU, low viscosity epoxy and water stop foam injection options. Follow TDS/SDS for more information and ensure proper industry and acceptable standard for cleaning, surface preparation and application by injection.
